## VMware License Optimization

# GET VM

### License Compliance Map

### Smarter VMware licensing management for optimization and cost reduction!

The "GetVMware" service offering provides a complete **overview of your VMware license inventory**. Offers recommendations for optimization and consolidation of licenses to help you save on the Total Cost of Ownership of the virtualization environment.

Use the GetVMware monitoring solution for real-time license usage status. Leverage Splunk to provide license key metrics to give you a 360 degrees overview of your VMware licensing inventory including license entitlement, usage levels and compliance dashboards.

### GetVMware software and services features:

- ✓ Central VMware license **monitoring hub**
- ✓ Accurate picture of the **subscription levels** and duration **period**
- ✓ Complete analysis of **cost savings** by optimized licensing
- ✓ **Compliance evaluation** to mitigate risk on VMware audits and avoid penalties
- ✓ Data collection onsite via the Splunk App part of the GetVMware solution

### Business Partner:

- ✓ Maximize **ELA opportunities** and increase your **margin**
- ✓ Have a better positioning for **Deal Registrations** with VMware
- ✓ Gain customer trust with an accurate status of license inventory

### The Challenge

IT administrators in the process of renewing, upgrading or buying new VMware licenses, face the problem of lack of accurate knowledge of the different types of license structures used by different departments at the enterprise level.

Currently, a so-called "target value determination" for the customer is only possible with the MyVMware portal, but administrators need to compare this data with other sources in order to obtain an accurate picture. This process is in many cases rarely done or if done, it's performed manually; therefore, no reliable outcome about the current license usage is possible!

### Benefits

- Full license inventory and structure overview
- Contract numbers and super-users overview
- Identification of underused licenses
- Evaluation of consolidation opportunities (OEM or VMware directly)
