

An Overview to zMaint Maintenance Successful Automation

zMAINT

Software Maintenance for mainframe environments can be very complex even for experienced systems programmers. This situation can lead to major issues such as becoming back-level and lead to a lack of support to applications, or delays on planned hardware upgrades.

zMaint

The foundation for your system stability

- With zMaint you can stay up to date with your systems, optimize, and automate your processes for a highly efficient and resilient mainframe operation.
- This service takes over the installation, maintenance, and migration of your z/OS software based on your zMaint Managed Service module (Light, Basic, Advanced or Premium) and for both IBM and ISV software in the mainframe area.
- Each zMaint module comes with a full set of installation sources supplied, which allows zMaint to be installed on short notice and ensures a high level of quality and repeatability.
- Depending on the licensed zMaint module, *SVA Software, Inc.* carries out extensive and comprehensive testing for the software installation. The zMaint Managed Service does not make any changes to your business data or the current system environment. As a zMaint customer, you can choose and switch between the different modules which provide flexibility for your setup, upgrades and always fit your framework conditions – flexibility even at short notice.

Diversity provides flexibility

Automate successfully

zMaint is available in different stages of expansion and service levels. The entry-level into zMaint Managed Service is the “Light” module and, as the final expansion stage, the “Premium” - Module.

Which module is right for you, depends on different parameters. These include the number of staff available, the operational, and availability requirements that put your company on the mainframe platform.

We are happy to help you evaluate the right zMaint module for your particular needs.

Installation of SMP/E and non-SMP/E software, creation of a system pack with your naming protocols, including complete customization, IVP test and basic system test.

Delivery and system testing, tests approval, handover to production, support in CPI management, project collaboration, consulting, introduction of new functionalities, etc.

Standardized processes increase your security

With zMaint, your systems are automatically updated with the latest versions from a software repository, the complete delivery takes place at intervals agreed and coordinated with you to ensure a smooth process.

We provide you with reliable, production-ready z/OS systems. Our delivery manager and product managers will be in close contact with you to ensure highly available operation on your side.

LIGHT

We deliver your installation base

BASIC

We complement a system concept with your naming protocols

ADVANCED

We take responsibility for your system maintenance

PREMIUM

We support you outside the maintenance process

Our zMaint Premium package

The Premium Package is the “all-round carefree” module of the zMaint Service. As part of a service contingent, this package includes all the know-how support your product managers require. The type and level of support can be flexibly adjusted during the contract period, so that you have the flexibility to react quickly to changing market conditions. We support you on a project-related or permanent basis, depending on your needs.
